

glad to have him there, his presence could prove embarrassing to the British Museum should he be caught. Harry replied that he hadn't really thought of it in those terms and that he would go back. When he returned to Tidworth Barracks, Harry was chagrined that he hadn't ever been missed.

Perhaps those at Tidworth Barracks had not missed Harry Clench, but those of us who now remain surely do! We will miss his astute scientific observations, his helping hand whenever we needed it and his ever-present wit. Most of all, however, we have lost an irreplaceable friend. Know, Harry, that we think of you often and fondly.

#### TWO BOISDUVAL MANUSCRIPT GENERIC NAMES FIRST PUBLISHED BY LACORDAIRE IN 1833

In the first installment of a paper on French Guianan butterflies, Lacordaire (1833, *Ann. Soc. Entomol. France* 2: 379-397) introduced two generic names which had been used by Boisduval in manuscript. These names were not recorded by Hemming (1967, *Bull. Brit. Mus. Nat. Hist. (Entomol.)*, Suppl. 9: 1-509).

The first such name is *Lucidia* (p. 387), which is valid and available, having as type-species (by monotypy) *Papilio albula* Cramer, 1776. A similar name (*Leucidia*) was introduced by Doubleday in 1847 (*Gen. Diurn. Lep.*: 77), for a different but related genus, indicating that it was a Boisduval manuscript name. Obviously, both *Lucidia* Lacordaire, 1833 and *Leucidia* Doubleday, [1847] were taken from the same Boisduval "label name," which probably had a variable spelling.

*Lucidia* Lacordaire (Pieridae) is considered here as a junior subjective synonym of *Eurema* Hübner, [1819].

The second name is *Peridromia*, which was given by Lacordaire (p. 392) to five nymphalids. I hereby designate *Papilio arethusa* Cramer, 1776, the last of the five species mentioned by Lacordaire, as the type-species of his genus *Peridromia*. By this action, *Peridromia* Lacordaire becomes a senior objective synonym of *Peridromia* Boisduval, 1836 (cf. Hemming, op. cit.).

Lt. Col. C. F. Cowan kindly advised me on this note.
